

New York City - Jan 17th 1943

- Died of a heart attack
- FBI supposedly seized his research

Tesla invented alternating current (AC)

- AC can be transformed from high voltage to low voltage
- AC can travel further distances compared to DC

Tesla had a very traumatic childhood

How did Edison and Tesla end up working together?

Tesla traveled across the Atlantic to go to New York City to meet Edison. Tesla was hired immediately from Edison. During his free time, Tesla continued to work on AC current.

- Very poor financial decisions
- Died penniless in 1943
- Legacy lives on as his work was the foundation for our modern power grids, AC power, and wireless technology.
